

# FOLLOW THE ENERGY

**EEMSHAVEN:** MAIN HUB IN OFFSHORE WIND INDUSTRY

## EEMSHAVEN MEETS MARITIME REQUIREMENTS OFFSHORE WIND INDUSTRY

- Draught: 7,5 - 14 m.
- Quay length: 5,293 m. (private and public quays)
- Jetty length: 1,130 m
- Width of fairway and basin(s): 110 - 350 m.
- Wide port entrance: suitable to transport assembled three-bladed rotors
- No infrastructural restrictions sail in/out of large material (power lines, bridges, locks, etc.)
- Near quay jacking
- Heavy load quays; 30 tons/m<sup>2</sup> and 20 tons/m<sup>2</sup>
- Limited tidal range (2.5 m.)
- Approx. 40 hectares offshore sites available

## GOALS | PLANNING UP TO 2050

### GOALS 2030:

Netherlands (west coast):	± 11.5 GW
Germany (German Bight North Sea):	± 20 GW
United Kingdom	± 40 GW

### GOALS 2050:

Netherlands (west & northern coast):	± 20-40 GW
Germany (German Bight North Sea):	± 40 GW
United Kingdom:	± 75 GW

# FOLLOW THE ENERGY

Around a third of all the energy that is produced in the Netherlands comes from Eemshaven. With an installed capacity of 8,000 MW Eemshaven is known as an energy port. Major energy producers have invested billions of Euros in new power stations; an oil terminal was built; Google is expanding its immense data centre; and Eemshaven houses one of the largest onshore wind farm in the Netherlands. The port also plays a prominent role in the development of wind farms at sea during their construction and the subsequent maintenance of the wind turbines. Eemshaven lives and breathes offshore wind and has become one of the leading ports in the offshore wind industry around the North Sea. In 2020/2021 transport and installation work took place for the world's largest offshore wind farm: Hornsea Two (UK). During 2022 installation of wind farm Kaskasi took place. Eemshaven has also a prominent role in the project NorthH2, an international consortium that is jointly investigating the feasibility of large-scale production, storage and transmission of green hydrogen. Furthermore RelyOn Nutec is due to open a new training centre in Eemshaven early 2023, to meet the increasing demand from the onshore and offshore wind industries in the Groningen area. Also TKF (Tweentsche Kabelfabriek) chose Eemshaven for its cable factory and the consortium Decom North concluded a covenant that marks the start of a closed chain for the supply, dismantling and recycling of wind turbine blades in Eemshaven.

## IMPRESSIVE TRACK RECORD

Since 2009 Eemshaven plays an important role regarding assembly and shipping activities of wind turbines, which results in an impressive track record of wind farms launched from Eemshaven: successively Alpha Ventus, Bard Offshore I, Borkum Riffgat, Borkum Riffgrund I, Trianel Windpark Borkum, Global Tech I, Gemini, Gode Wind I & II, Veja Mate, Race Bank (UK), Nordsee One, Borkum Riffgrund II, Merkur Offshore, Hohe See, Albatros, Trianel Windpark Borkum II, Hornsea Two and Kaskasi. From October 2022 Eemshaven is going to serve as base port for the Hollandse Kust Noord offshore wind farm. In the near future many offshore wind projects are planned in which Eemshaven could be involved.

## PLUG IN

Follow the energy and plug into your opportunities in Eemshaven. Contractors, construction companies, service and maintenance companies in the offshore wind industry, please contact our business manager below.

# EEMSHAVEN: MAIN HUB IN OFFSHORE WIND INDUSTRY

## EXCELLENT SITUATED AND MANY FACILITIES

Eemshaven lives and breathes offshore wind. The port has become one of the leading ports in the offshore wind industry around the North Sea. Eemshaven is excellently situated, close to the North Sea, and well-equipped to accommodate logistic (offshore) projects. Many facilities are available in Eemshaven, like business sites, service locations, storage possibilities, (heavy load) quays, jetties, a heliport, office space, etc. which makes this port excellent suitable as base or service port. The distance to the wind farms (under construction, planned or completed) is short.

## TRACK RECORD

Eemshaven has an impressive track record of wind farms launched: successively **Alpha Ventus, Bard Offshore I, Borkum Riffgat, Borkum Riffgrund I, Trianel Windpark Borkum, Global Tech I, Gemini, Gode Wind I & II, Veja Mate, Race Bank, Nordsee One, Merkur Offshore, Borkum Riffgrund II, Hohe See, Albatros, Trianel Windpark Borkum II, Hornsea Two and Kaskasi**. Eemshaven is also in use for operation and maintenance activities. Currently the wind farms Gemini (Siemens Gamesa), Veja Mate (Siemens Gamesa), Merkur Offshore (General Electric - GE) and Deutsche Bucht (Vestas) have their O&M service base in Eemshaven. Also Global Tech I and BARD Offshore are maintained and/or repowered in Eemshaven.

## DIRECT ACCESS TO THE NORTH SEA

Due to the uncongested roads and ports, and efficient logistics there are hardly any waiting times in the Eemshaven. Eemshaven is multimodal attainable and has direct access to the North Sea. The port basins are wide and there are no sealocks or bridges, which makes it possible to pre-assemble the rotor blades and the nacelle in Eemshaven and transship the complete rotor star to the concerned wind farm. Furthermore Eemshaven has a heliport, a train station and an airport is in the vicinity.

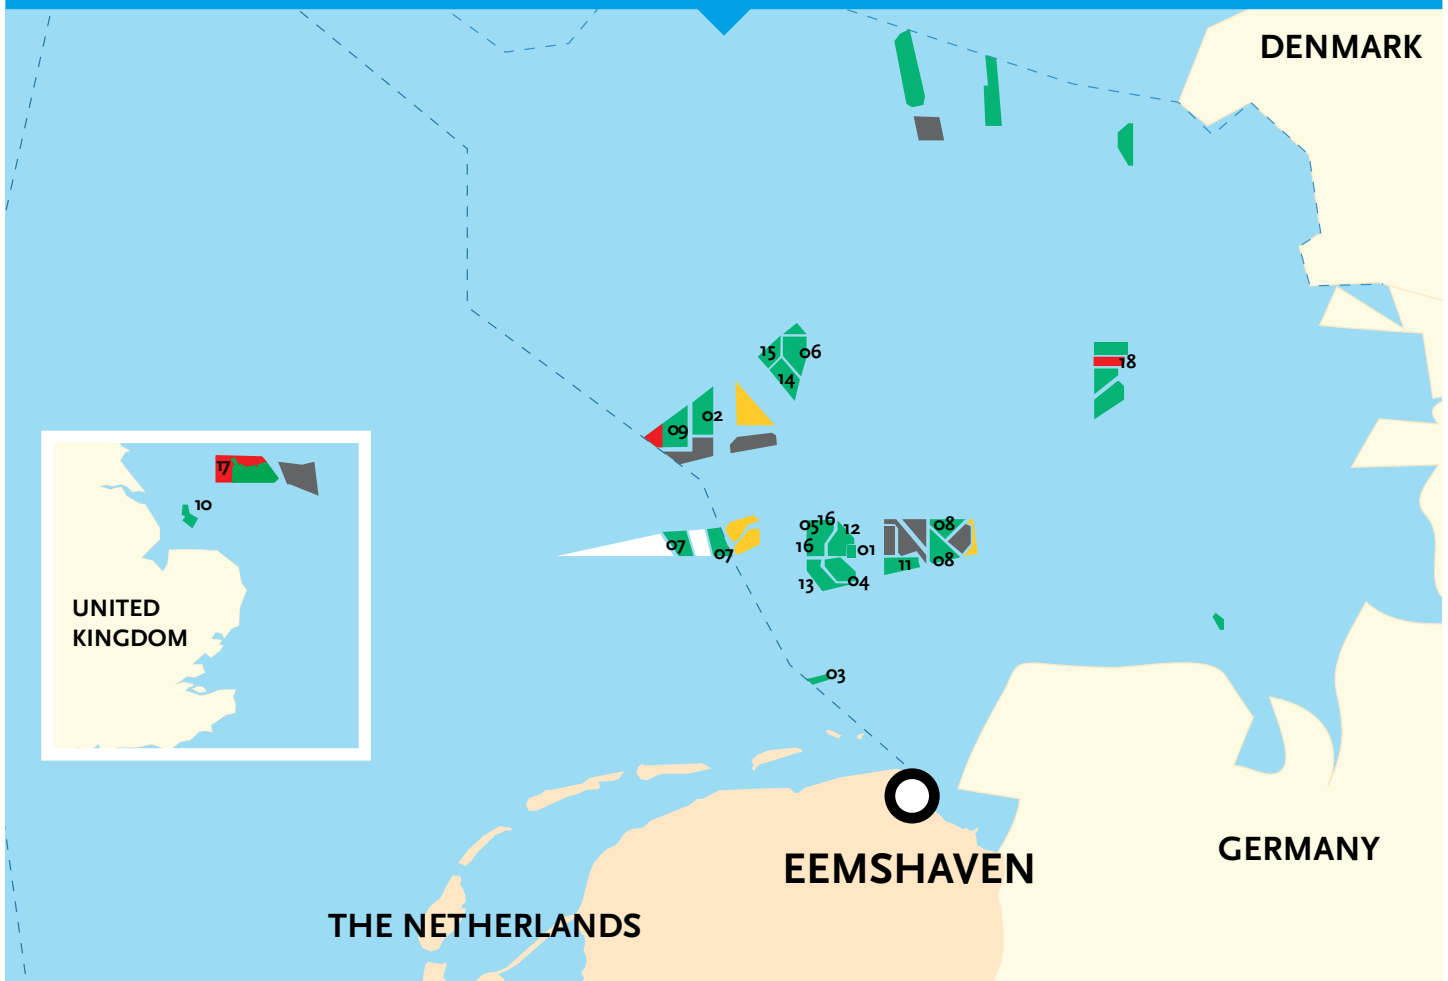

## SERVICE PORT

Both Eemshaven and Beatrixhaven are suitable for service and maintenance activities regarding the offshore wind business. There are sufficient berthing places for service operation vessels, cable layers and other offshore support vessels and it is possible to embark passengers. Besides that, plenty of storage areas are available: paved or unpaved, outside and/or in warehouses. Furthermore, several sites for permanent use are available around the Emma- or Beatrixhaven and can be bought or leased. It is also possible to rent existing locations or make use of existing facilities.

**“EEMSHAVEN: ONE OF THE LEADING PORTS IN THE  
OFFSHORE WIND INDUSTRY AROUND THE NORTH SEA”**

# GENERAL SETTINGS EEMSHAVEN

- Within nautical range of planned windfarms
- Direct access to the North Sea
- Competitive lease prices
- Multimodal accessibility (road, rail, water, air)
- Presence of a heliport; close to airport
- Approx. 40 hectares offshore sites available
- Sufficient paved/unpaved storage area available (also adjacent to quay)
- Heavy cargo storage areas available
- Impressive track record (*see pages 14/15 and below*)
- Specialized stevedoring companies available (*see page 12*)
- Specialized offshore service companies available (*see page 12*)
- Heavy load quays (30 tons/m<sup>2</sup> and 20 tons/m<sup>2</sup> available)
- Extra widened bends to transport rotor blades and other exceptional components

# EEMSHAVEN: SERVICE PORT FOR MAINTENANCE ACTIVITIES

The profile of Eemshaven answers to be a service port for activities regarding the operations and maintenance (O&M) of offshore wind turbines. Both Emmahaven and Beatrixhaven are suitable to accommodate these kind of activities. There are sufficient berthing places for service operation vessels, cable layers and other offshore support vessels and it is possible to embark passengers. With connections for power supply and fresh water, storage possibilities, office space, customs clearance, and the presence of several logistic providers Eemshaven meets all requirements to accommodate maintenance and service companies.

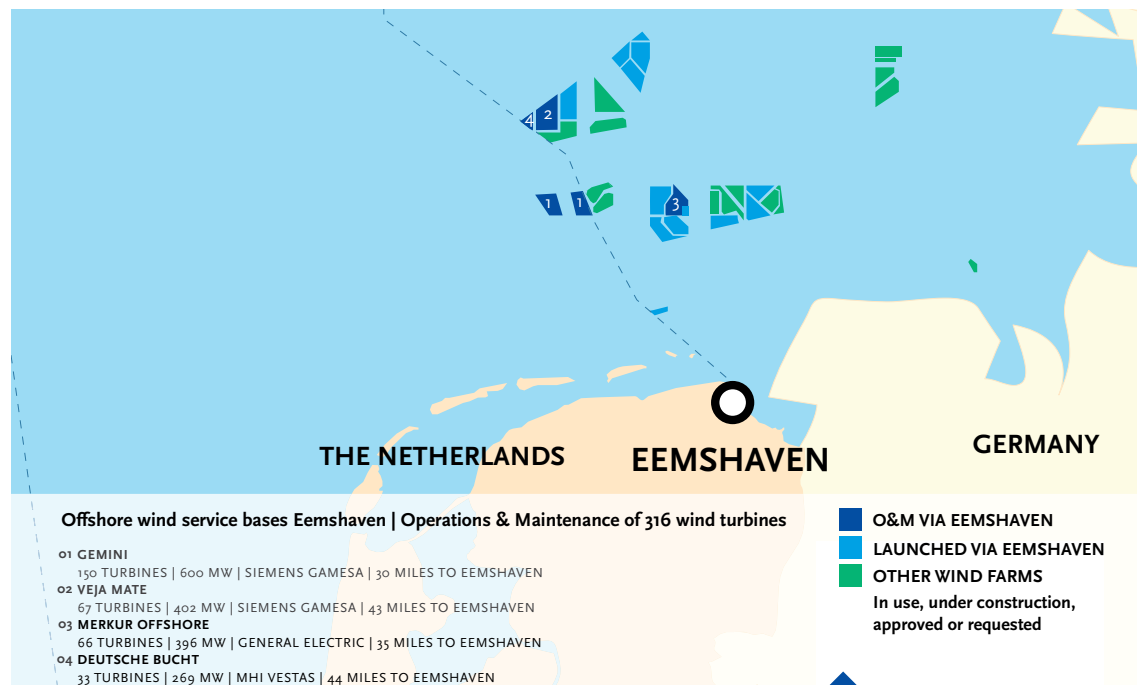

## EMMAHAVEN

Emmahaven is 500 metres long with a width of 120 to 150 metres, and a depth of 9.0 metres. A floating jetty and a services jetty provide more than 700 metres of berthing places for small and medium sized vessels. At the northern part of the Emmahaven Sealane operates a quay of 220 metres for general and/or dedicated cargo. At the western part Amasus has a jetty with a capacity of 130 metres and Gulf Bunkering operates a bunker terminal and supplies various high-quality fuels and lubricants for all oceangoing and inland vessels.

## BEATRIXHAVEN

Beatrixhaven is 1,200 metres long with a width of 110 to 150 metres, and a depth of 9.0 metres. At the northern part AG EMS operates a ferry terminal and EMS Maritime Offshore (EMO) runs an offshore service facility. EMO provides jetty capacity (300 metres) and offers lots of space for different configuration options. EMO is also the offshore service base for Siemens Gamesa (Gemini, Veja Mate) and General Electric (Merkur Offshore) and the operator of Heliport Eemshaven. Furthermore HNL operates a cruise-ferry to Norway. At the southern part Wijnne Barends operates a terminal and accommodates Subsea 7/Seaway Offshore Cables. Bek & Verburg, a specialist in waste collection and segregation, and DHSS, a vessel agency and port service provider, together have a offshore service base behind the quay. Vestas uses the DHSS Facility as O&M base for the Deutsche Bucht wind farm. At the western part Buss Terminal Eemshaven has a storage area for wind turbine parts and TKF builds a cable factory to produce cables for offshore wind farms.

## FOR SALE/LEASE MOORING FACILITIES, OFFICES, STORAGE, BUSINESS SITES

### FOR RENT (THIRD) PARTIES

1. EMS Maritime Offshore (storage + jetty)
2. Wijnne Barends (storage + quay)
3. Buss Terminal Eemshaven (storage + quay)
4. DHSS (storage + quay)
5. Wagenborg (storage + quay)
6. Sealane (storage + quay)
7. Amasus Shipping (storage + jetty)
8. RelyOn Nutec (training centre)
9. Gulf (bunkering)
10. Nijlicht (offices)
11. Services jetty (mooring facility)
12. Floating jetty (mooring facility)
13. Business sites (buy or lease)

## FACTS & FIGURES

### EEMSHAVEN

- Close to wind parks being build (low costs)
- Multimodal accessibility
- Draught Beatrixhaven: 7.5 m
- Draught Emmahaven: 7.5 m
- Jetty capacity: 1,130 m
- Warehouses available; offices available
- Storage space outside
- Connection for power and water
- Heavy mobile cranes
- Fuel bunkering
- Electricity (220 VAC and 380 VAC)
- Grey water disposal
- Water

# BEATRIXHAVEN: DEDICATED FOR OFFSHORE WIND FACILITY

HEAVY LOAD QUAY; 30 TONS/M<sup>2</sup> | NEAR QUAY JACKING

Groningen Seaports has examined the logistic possibilities of the Beatrixhaven for offshore construction and transshipment vessels like jack-ups, pontoons and freighters with large cranes. Simulations demonstrated that most offshore vessels can approach this basin without problems in wind conditions mounting 8 Bft.

#### BEATRIXHAVEN

Beatrixhaven is the Eemshaven's youngest harbour basin. With the completion of the Beatrixhaven Eemshaven has strengthened its position as base and service port in the offshore wind industry. A special quay with a length of 220 metres has been built for extra heavy cargoes on the western side. This heavy load quay has a maximum capacity (equally divided load) of 30 tons/m<sup>2</sup> and has been especially designed for the transshipment of extra-heavy cargoes such as wind turbine components. Jack-up ships can moor just in front of the quay. IHC IQIP e.g. used this quay to build up its 1,300 tons Noise Mitigation Systems (NMS) for mono-pile installation. The Beatrixhaven has a length of 1,200 metres and a turning basin has been put in place at the end. On the southern side a 1,200 metres long quay is available with space for companies to establish their businesses.

#### NEAR QUAY JACKING BEATRIXHAVEN

Jack-up vessels can moor in the Beatrixhaven just in front of the quay. That means these vessels can use their own cranes for loading activities.

#### ALLREADY ESTABLISHED

On the southern side the stevedoring company Wijnne Barends, that stores, transships and handles a broad range of cargo, has been established. It also accommodates the offshore service company Seaway Offshore Cables. Bek & Verburg, a specialist in waste collection and segregation, and DHSS, a vessel agency and port service provider, have also constructed an offshore service base behind the southern quay. DHSS accommodates Vestas for the O&M of wind farm Deutsche Bucht (33 turbines). On the western side Buss Terminal Eemshaven has a storage area for wind turbine parts and TKF (Twentsche Kabelfabriek) builds a cable factory. On the northern side AG EMS operates a passenger terminal with a ferry service to the German Wadden island of Borkum. Besides this terminal EMS Maritime Offshore (EMO) runs an offshore service facility with a jetty to accommodate service operations vessels. Siemens Gamesa and Merkur Offshore (General Electric) have offshore service-hubs on the EMO premises to operate and maintain 283 wind turbine generators for Gemini, Veja Mate and Merkur Offshore. Next to EMO Holland Norway Lines operates the first direct cruise-ferry connection between Holland and Norway (Kristiansand). There is still space for new establishments. Sites for permanent use can be bought or leased.

### FOR SALE APPROX. 40 HECTARES OFFSHORE SITES IN EEMSHAVEN

BUSINESS SITES • (HEAVY CARGO) QUAYS • MOORING FACILITIES FOR JACK-UP VESSELS

# HELIPORT EEMSHAVEN

Heliport Eemshaven is certified as international heliport and thus is the ideal gateway for transport and supply flights to offshore projects in the Exclusive Economic Zone in the North Sea. The infrastructure, including a take-off and landing area, is located in the north-western part of Eemshaven, close to the Borkum ferry service of AG EMS Borkumlijn. The total site covers an area of approximately 4.5 hectares, of which approximately 1.35 hectares is airfield. As well as a helicopter landing area, the site contains helicopter parking stands, an administration office and a fuel station. Heliport Eemshaven is operated by Ems Maritime Offshore (EMO). Owner of the infrastructure is Groningen Seaports.

It is necessary to use helicopters in addition to ships for the transport of personnel and tools because of the large distances to e.g. offshore wind farms. With the realisation of the heliport, Eemshaven is strengthening its strong position as a base and service port for the offshore industry. Please visit [www.heliport-eemshaven.nl](http://www.heliport-eemshaven.nl) or contact [heliport@offshoreservice.de](mailto:heliport@offshoreservice.de) by mail.

2021: 72 flights

# OFFSHORE WIND TEST TURBINES EEMSHAVEN

RWE (former Senvion), 2-B Energy and Lagerwey/Enercon have test turbines in Eemshaven. RWE hosts two 6.15 MW test turbines on the Wagenborg Stevedoring and Sealane premises. Both turbines are 114 m high and are part of the Westereems wind farm of RWE Innogy. The 6 MW 2-B Energy test turbine is carefully designed and integrated in an overall plant view that reaches substantial cost of energy savings over plant life. The 2-B Power Plant is a true offshore design, setting new standards and targets. It is a two bladed design, with a total length of 140 m. The turbine is 105 m high and offers access for helicopters. By having the two Lagerwey/Enercon 4.5 MW turbines, Eemshaven houses the tallest wind turbines in the Netherlands. These turbines, with a tip height of 200 metres, were installed by the Dutch wind turbine construction company Lagerwey (now Enercon). The second turbine was built with a special climbing crane; the first climbing crane in the world.

# STEVEDORING COMPANIES

Specialized stevedoring companies like Buss Terminal Eemshaven, Sealane, Wagenborg, and Wijnne Barends have been established in Eemshaven. They all offer quay facilities, handle logistic activities and have lots of experience in offshore wind business. Amasus Shipping and EMS Maritime Offshore also provide logistic services and offer for instance jetty capacity.

# SERVICE OFFSHORE VESSELS (SOV's)

In recent years, Eemshaven has not only grown into an important base port for offshore wind logistics (18 offshore wind farms have been constructed via Eemshaven), but also into a service port for the maintenance of the currently installed offshore wind turbines. Eemshaven is already the maintenance base for the Gemini, Veja Mate, Merkur Offshore and Deutsche Bucht wind farms (316 turbines in total). Each wind farm uses its own service offshore vessel for operation & maintenance activities. Eemshaven is base port for the vessels below and offers sufficient berthing places for other SOV's, cable layers and/or supply vessels.

**Windea La Cour** for Gemini

**SOV's in Beatrixhaven** for several projects

**Jules Verne | Esvagt Albert Betz** for Deutsche Bucht

# KICKSTARTING THE GREEN HYDROGEN ECONOMY | NORTH<sub>2</sub>

NorthH<sub>2</sub> is an international consortium. We are jointly investigating the feasibility of large-scale production, storage and transmission of green hydrogen. To make industry greener, we need to be able to rely on a stable, large supply of green hydrogen. Such a large-scale supply is only possible if we tackle the entire supply chain simultaneously.

Given this realisation, the consortium comprising Groningen Seaports, Eneco, RWE, Equinor, Shell and Gasunie, and with the support of the province of Groningen, is investigating how we can achieve this large-scale supply by working together on all aspects of the supply chain – from wind energy and electrolysis to transmission and storage.

The aim is to be able to supply industry with 4GW of green hydrogen by 2030. But the ambition goes further than that. NorthH<sub>2</sub> wants to upscale to more than 10 gigawatts of green hydrogen production capacity by 2040. By then, green hydrogen output, which will initially be produced in Eemshaven and later possibly offshore as well, will total around 1,000,000 metric tons on an annual basis, cutting carbon emissions by 8 to 10 megatonnes a year.

# OFFSHORE WIND INNOVATION CENTRE | OWIC

The Offshore Wind Innovation Centre (OWIC) in Eemshaven is an information, training and innovation organisation for companies and knowledge institutions involved in offshore wind energy. The OWIC facilitates the development of activity and innovation in the field of offshore wind energy. It brings together knowledge and experience and makes it accessible to public authorities, knowledge institutions and the business community. The OWIC enables companies to innovate and develop in offshore wind energy more quickly and easily, focusing on operations & maintenance (O&M) activities. The OWIC is the place to go for information and get in touch with others involved in the subject. The OWIC is also setting up training and education facilities for offshore wind energy.

The OWIC has now initiated a number of projects: Droneport Eemshaven, which focuses on wind turbine inspections, Cable Centre Eemshaven, an alliance of companies whose activities include cable storage, flushing and transport, and Ocean Grazer, a start-up company working on a test field for energy storage at Eemshaven.

# EEMSHAVEN: POWER POINT (8,000 MW) FOR WIND ENERGY

Eemshaven is not only base port or service port for the offshore wind industry, but it is also the landing port for international connections, especially for wind energy. Several converter stations are operational in Eemshaven and there are connections with Norway, UK, Germany, and Denmark. Add the energy producing companies established in Eemshaven and it is obvious that with a capacity of 8,000 MW Eemshaven is the power point of and balancing hub for Northwest Europe.

Landing station Gemini

Wind farm 'Ten noorden van de Waddeneilanden' will land in Eemshaven

Converter station TenneT | NorNed (above) - undersea high voltage cable between Eemshaven (NL) and Fedaa (N) and TenneT | COBRA (under) - cable between Eemshaven (NL) and Endrup (DK).

Present and future fibre connections e.g. the COBRACable to Denmark. It is expected that many future wind farms are located close to this COBRACable.

# NAUTICAL POSSIBILITIES

## BEATRIXHAVEN

Length	1,200 m
Width	110-150 m
Draught max.	7.5 m
Jacking permitted	Yes

### QUAY:

Losstoep Theo Pouw	6.10 m

## EMMAHAVEN

Length	500 m
Width	110-150 m
Draught max.	7.5 m
Jacking permitted	Not allowed

### QUAY:

Quay length (north)	250 m (pressure 4-6 ton/m <sup>2</sup> )
Quay width	varies
Quay height	4.4 m

### OTHER FACILITIES:

Private jetty	130 m
Services jetty	120 m
Floating jetty	740 m
Losstoep Wagenborg	320 m (mooring location pontoons)

\* Subject to location and penetration spudcans  
 "Groningen Seaports believes that the mentioned details are correct, but some data may be subject to changes"

# SOIL CONDITIONS

## EEMSHAVEN SUITABLE

### FOR JACKING

The port of Eemshaven is situated in the north of the Netherlands at the river Ems close to Germany, bordering the Wadden Sea. Most of the port area is reclaimed land outside the primary dikes. The area has been raised with 4 to 5 m sand, therefore providing stable soil conditions for on-shore developments. Jack-up vessels frequently visited Eemshaven during the last years to load heavy equipment required for the construction of wind farms.

#### JULIANA- AND BEATRIXHAVEN BASINS

Based on cone penetration tests a W-E profile has been constructed directly North of the western part of the Juliana harbour basin. The depth of the soil profile is 50 m starting at approximately NAP+4,5 m. The profile shows a sandy top layer to approximately NAP -15 m, followed by a layer of clayey silt, silty clay to NAP-19 m/ NAP-23 m. Underneath follows generally a well compacted sand layer.

FIGURE 1 >>

Soil profile W-E North side western part of the Julianahaven basin (length profile appr. 600 m.). The soil profile shown in figure 1 gives an impression of the soil conditions of this part of the Eemshaven. Variations can occur depending on the exact area of interest.
