Chemport Innovation Center

Scaling up green chemistry

A-test location for scale-ups

As a promotor of green chemistry, the Chemport Innovation Center in Delfzijl helps scale-ups and chemical and innovative companies to advance their sustainable ideas and technologies. It is the incubator for the chemistry of the future and offers every opportunity to set up pilot plants for green chemical processes in an industrial setting. The centre is licensed and facilitates and unburdens companies so that they can focus entirely on continuing to develop their innovative processes and test their products. Chemport Innovation Center consists of a factory hall with several office spaces and is the ideal stepping stone from a pilot plant to a factory.

Mission

Chemport Innovation Center is there to facilitate, stimulate, and support start-ups and scale-ups in the Chemport region to further develop their sustainable, innovative products to scale up to the construction of their own plant in the short or medium term.

Facts and figures

- Test room tailored to your needs
- Full focus on your pilot
- Networking with other (chemical) companies
- Various furnished office spaces
- Shared canteen
- Current established scale-ups: ExxFire and Uppact
- Former active scale-ups: Geowall
- Space for expansion (3.3 hectares available)
- In the middle of the industrial area of Delfzijl
