PORT OF EEMSHAVEN

Around a third of all the energy that is produced in the Netherlands comes from Eemshaven. With an installed capacity of 8,000 MW Eemshaven is an energy port of note. The port also plays a prominent role in the development of wind parks at sea during their construction and the subsequent maintenance of the wind turbines. With a draught of 14 metres, Eemshaven is a deepwater port. There is more than 5 kilometres of quay distributed over 4 basins. Eemshaven has multimodal access and with quays as well as a public ro-ro facilities, ramps, a jetty and various logistics service providers it has all the facilities for transshipping goods.

FACTS & FIGURES

- Transshipment 9,391,351 tonnes (2023)
- Surface area: 1,324 hectares
- Available: 177 hectares
- Quay length: 5,120 metres
- Draught: 14 metres
- 1/3 of total Dutch energy production
